

COURSE OUTLINE

1. Study programme information

1.1 Higher education institution	Universitatea de Vest din Timișoara
1.2 Faculty / Department	Chimie, Biologie, Geografie / Departamentul de Geografie
1.3 Sub-department	Geografie
1.4 Field of study	Geography
1.5 Level of study	Master's degree
1.6 Study programme / Qualification	Geographic Information Systems

2. Course information

2.1 Course title			In	trodu	ction to programming			
2.2 Course convenor/ Lecturer			Le	Lect. Dr. Dornik Andrei				
2.3 Teaching assista	ant		Le	ect. Dr	. Dornik Andrei			
2.4 Year of study	1	2.5 Semester		1	2.6 Type of assessment	E	2.7 Course type	DS/
								DO

3. Total estimated time (hours of didactic activities per semester)

		-			
3.1 Number of hours per week	3	of which: 3.2 lecture	1	3.3 seminar/laboratory	2
3.4 Total hours in the curriculum	42	of which: 3.5 lecture	14	3.6 seminar/laboratory	28
Time distribution:					hours
Studying textbooks, course materials	, bibliogı	aphy and notes			35
Further research in libraries, on electronic platforms and in the field					35
Preparing seminars/ laboratories, homework, research papers, portfolios and essays					20
Tutoring					9
Examinations					9
Other activities					
3.7 Total hours of individual study	108				
· · · · · · · · · · · · · · · · · · ·					

3.8 Total hours per semester1503.9 Number of credits6

4. Prerequisites (if applicable)

4.1 based on curriculum	Basics in informatics; Geographic Information Systems; Geoinformatics
4.2 based on competencies	Basic skills of computer use; analytical spirit and the ability to break down
	problems into sub-problems

5. Conditions (if applicable)

	1	
5.1 for the course	•	Computer / laptop with audio-video system for the teacher and students
	•	internet access; access to the Elearning UVT platform;
	•	video projector
5.2 for the seminar/laboratory	•	complete fulfilment of tasks of laboratory work and projects
	•	Computer / laptop with audio-video system for the teacher and students;
	•	internet access; access to the Elearning UVT platform;
	•	video projector

6. Objectives of the discipline - expected learning outcomes to the formation of which contribute to the completion and promotion of the discipline

L	and promotion of the discipline				
	Basic knowledge of computer science and mathematics				
	• Concepts related to the structure and operation of a computing system				
Knowledges	• Concepts and methodologies regarding the analysis, design and implementation of				
	computer applications				
	Understanding the operation of an algorithm				
	Create algorithms in pseudocode				
	• Analysis of the complexity and correctness of a code				
	• Implementation and testing of a program				
	• The ability to identify algorithms and data structures appropriate to a particular problem, to				
Skils	apply the principles of computer application development, and to implement algorithms in a				
SKIIS	programming language				
	• The ability to use programming environments/tools/platforms specific to each stage in the				
	development of program				
	• The ability to use file systems, to manage processes specific to a computing system, to				
	ensure effective communication between software components				
	• Development of a critical and analytical spirit among students; appreciating the advantages				
	of using algorithmic thinking				
	• The ability to solve specific tasks autonomously				
	• The ability to identify/select appropriate solutions and generate innovative ideas				
	• The ability to correctly/effectively identify and plan tasks specific to a particular project				
Responsibility	• The application of effective and responsible work strategies, based on the principles, norms				
and autonomy	and values of the code of professional ethics				
	• Application of effective work techniques in a multidisciplinary team, ethical attitude,				
	respect for diversity and multiculturalism, acceptance of diversity of opinion				
	• Self-assessment of the need for continuous professional training for the purpose of insertion				
	and adaptability to the requirements of the labor market				
	Capitalizing on the results obtained to analyses, studies and geographical projects				

7. Content

7.1 Lecture	Teaching methods	Observations
1. Introduction to algorithms. The notion of algorithm. The objectives of	Lecture, Interactive	2 hours
programming. Properties of algorithms. Data and data classifications.	presentations,	
Simple processing. Structured processing (sequential, decision, cycle).	heuristic	
2. Description of algorithms and variables. Pseudocode. Description of	conversation,	2 hours
fundamental processing and structured data. Examples of simple	problematization and	
algorithms (calculations of sums and finite products, approximation of	hands-on examples	
infinite sums, operations on whole numbers, operations on tables).		
Successive refinement technique and decomposition of an algorithm into		
subalgorithms.		
3. Lists and dictionaries. Definition and access to elements. Simple		3 hours
operations on lists. Lists. Elementary sorting methods. The problem and		
method of inserting, selecting and exchanging neighboring elements (for		
each method: variants of the algorithm, correctness verification,		
complexity analysis).		
4. Functions. Local variables. Parameter specification. Calling functions.		2 hours
Returning the results.		
5. Working with files. Exception handling.		1 hours
6. Implementation of recursive functions. Implementation of recursive		2 hours

algorithms (generation of normulations, generation of subsets)		
algorithms (generation of permutations, generation of subsets).		2 h anns
7. Algorithm debugging. The stages of verifying the correctness of the		2 hours
algorithms. Elements of formal analysis of correctness: preconditions,		
postconditions, invariants, termination functions. Analysis of the		
complexity of algorithms. Purpose of the analysis. Analyzed resources.		
Estimation of execution time (best case, worst case, average case).		
Examples: finite sums, product of two matrices, minimum		
determination, sequential search.

uvt.ro/)		<u></u>
7.2 Seminar / laboratory	Teaching methods	Observations
1. Introduction to Python. Installation. Familiarization with the interface.	Hands-on exercises,	2 hours
The read-evaluate-print cycle. Evaluation of expressions. Simple	case studies,	
mathematical operations.	scientific	
2. Specifying variables (numeric, logical, character strings). Rules for	explanation and	2 hours
constructing expressions. Explicit display of results. Specifying	demonstration.	
conditional and repetitive processing.		
3. Lists and dictionaries. Definition and access to elements. Simple		2 hours
operations on lists.		
4. Definition of functions. Local variables. Parameter specification.		2 hours
Calling functions. Returning the results.		- 110 010
5. Working with files. Exception handling.		2 hours
6. Processing of lists. Implementation of search and sorting algorithms		2 hours
7. Implementation of recursive functions. Implementation of recursive		2 hours
algorithms (generation of permutations, generation of subsets).		2 110013
8. Implementation of algorithms based on the division technique (binary		2 hours
search, simple algorithms from computational geometry)		2 110018
		2 h anna
9. Implementation of quick sorting and sorting by interclassing		2 hours
10. Other data types (tuples). The difference between modifiable and non-modifiable types. Implementation of heuristic algorithms.		2 hours
11. Peculiarities of working with multidimensional lists. Implementation of optimization algorithms based on dynamic programming.		2 hours
		2 hours
12. Modules and packages. Creation and use. Import and reload		2 hours
functions. Namespaces.		21
13. Implementation of some algorithms based on the return search		2 hours
technique. Implementation of some algorithms based on the branch and		
bound technique.		
14. Evaluation, Feedback		2 hours

8. Corroborating course content with the expectations held by the representatives of the epistemic community, professional associations and typical employers in the field of the study programme

The content of the discipline was developed in accordance with the curriculum and meets the didactic and scientific requirements corresponding to similar specializations in other university centers. Introduction to programming facilitates the acquisition of basic knowledge in carrying out a research project, both from a theoretical point of view and from the point of view of working methods in the field, developing students' analytical thinking, the ability to problematize, to manage a scientific approach, of a database and its operation. The software used in the practical applications are among the most modern and frequently used in specialized institutions. Such applied training makes students compatible with the job market in the field of geographic information systems, or research activity.

9. Assessment

Type of activity9.1 Assessment criteria		9.2 Assessment	9.3 Weight in the			
		methods	final mark			
9.4 Lecture	Understanding and assimilation of	Written test	15%			
	knowledge - Partial evaluation					
	Understanding and assimilation of	Written test	15%			
	knowledge - Final evaluation					
9.5 Seminar /	Activity during laboratory	Continuous evaluation	20%			
laboratory	Verification of programming skills	Practical test	50%			
9.6 Minimum perf	ormance standard	-				
Minimum mark 5 at course evaluation.						
Minimum	mark 5 at practical activities.
